DOCKET NO.: CRNT-0008 PATENT Application No.: 09/765,910

Office Action Dated: June 5, 2003

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (Canceled)

- 2. (Canceled)
- 3. (Canceled)
- 4. (Canceled)
- 5. (Canceled)
- 6. (Canceled)
- 7. (Canceled)
- 8. (Canceled)
- 9. (Canceled)
- 10. (Canceled)
- 11. (Currently Amended) The system method of claim 10 37, wherein the power line communications repeater is a router.
- 12. (Currently Amended) The system method of claim 10 37, wherein the second power line communications repeater prevents a first subscriber from accessing data associated with a second subscriber.
- 13. (Currently Amended) The system method of claim 10 37, wherein the first filter is coupled to the electrical power line on the subscriber side of an electrical power meter.
- 14. (Currently Amended) The system method of claim 40 <u>37</u>, wherein the first filter is coupled to the electrical power line on the electrical transformer side of an electrical power meter.

PATENT

Application No.: 09/765,910

Office Action Dated: June 5, 2003

15. (Currently Amended) The system method of claim 10 37, wherein the first power line communications repeater is connected across both the first filter and an electrical power meter.

- 16. (Currently Amended) The system method of claim 11 37, wherein the first power line communications repeater is connected across both the first filter and an electrical power meter.
 - 17. (Canceled)
- 18. (Currently Amended) The system method of claim 10 37, further comprising communicatively coupling a data network in communication with the first power line communications repeater to a data network, and wherein the data network provides the data signals.
- 19. (Currently Amended) The system method of claim 18, wherein the data network is a wide area network.
- 20. (Currently Amended) The system <u>method</u> of claim 18, wherein the data network is in communication with the electrical power line on the transformer side of the first filter.
- 21. (Currently Amended) The system method of claim 11, wherein the router is in communication with a plurality of subscribers.
 - 22. (Canceled)
 - 24. (Canceled)
- 25. (Currently Amended) The system method of claim 40 37, wherein the first filter is conductively connected to the electrical power line.
- 26. (Currently Amended) The system method of claim 40 37, wherein the first filter is inductively coupled to the electrical power line.

DOCKET NO.: CRNT-0008 PATENT

Application No.: 09/765,910
Office Action Dated: June 5, 2003

27. (Currently Amended) The system method of claim 26, wherein the first filter is a toroid through which the electrical power line passes.

- 28. (Canceled)
- 29. (Canceled)
- 30. (Currently Amended) A system for providing network communications to a subscriber device devices at a plurality of subscriber premises through a branch line, a the branch line connected to an electric power distribution transformer and to the connecting each subscriber premises to an electric power distribution transformer, the system comprising:

a router communicatively coupled to the <u>plurality of branch lines</u> at a node to control data communications for the subscriber premises; and

<u>a plurality of low pass filters with each said a low pass filter coupled to a</u>

<u>different the branch line on the electric power distribution transformer side of the node; and a low pass filter coupled to a low pass fi</u>

wherein each filter prevents the flow of data signals through the branch line and permits the flow of power signals through the branch line.

- 31. (Canceled)
- 32. (New) A method of providing data communications in a power line communication network that comprises a branch line connected to a subscriber premises through an electric power meter, the method comprising:

coupling a low pass filter to the branch line on the subscriber side of the power meter;

coupling a first port of a power line communications repeater to the branch

Office Action Dated: June 5, 2003

line on a first side of the filter; and

coupling a second port of the power line communications repeater to the branch line on a second side of the filter.

- 33. (New) The method of claim 32, wherein the power line communications repeater is connected across both the low pass filter and the power meter.
- 34. (New) A method of providing data communications in a power line communication network that comprises a branch line connecting a distribution transformer to a subscriber premises through an electric power meter, the method comprising:

coupling a low pass filter to the branch line on the distribution transformer side of the power meter;

coupling a first port of a power line communications repeater to the branch line on a first side of the filter; and

coupling a second port of the power line communications repeater to the branch line on a second side of the filter.

- 35. (New) The method of claim 34, wherein the power line communications repeater is connected across both the low pass filter and the power meter.
- 36. (New) A method of isolating data in a power line communication network that comprises a branch line connected to a subscriber premises through an electric power meter, the method comprising:

coupling a low pass filter to the branch line; and

DOCKET NO.: CRNT-0008 **Application No.:** 09/765,910

Office Action Dated: June 5, 2003

PATENT

coupling a power line communications repeater to the branch line across both the low pass filter and the power meter.

37. (New) A method of providing data communications over an electrical distribution system comprising an electrical distribution transformer, the electrical distribution transformer being coupled to a first and second electrical power lines, which are each coupled to a different subscriber premises, the system further comprising:

coupling a first filter to the first electrical power line;

coupling a second filter to the second electrical power line, wherein the first and second filters prevent the flow of data signals through the electrical power line and permit the flow of power signals through the electrical power line;

communicatively coupling a first power line communications repeater to the first electrical power line across the first filter; and

communicatively coupling a second power line communications repeater to the second electrical power line across the second filter.
